## Moon

### Nexia

"We conceive light as an emotion". Nexia has launched a totally unique range of spotlights. Moon, with its exclusive and architectural design, features the latest lighting technology. Nexia offers complete and upscale lighting solutions, taking care of light control with a new range of technical accessories, the use of Bluetooth, VCL technology, dim to warm and tunable white dimming controls.

## Dunbar 160

### Astro Lighting

Inspired by the flowing lines of a Mobius strip, Astro's concrete Dunbar 160 combines a soft curve structure with the crisp linear edge of its light output, where deeply recessed LEDs provide powerful yet glare-free illumination. Celebrating the character and charm of raw material aesthetics, the Dunbar 160 is individually cast by reinforcing raw concrete with weatherproofing additives. The result is an authentic luminaire with natural imperfections and a unique finish.

## Protozoa

### Mike Stoane Lighting

Protozoa, like the 16mm Surf Type S when that launched in 2009, is the smallest technical luminaire in its class. Merely 9mm and 37.5mm tall at maximum extension, it has full 360-degree pan and 180-degree tilt adjustment. A very low glare, high-grade optic delivers a generous 13 to 60-degree zoomable clean beam. Launched with 3000K and 90+ CRI initially, it is available in surface mount and soon also semi-recessed, stick mount and repositionable track mount.

## Six

### Arkoslight

Six, designed by Arkoslight's head of design, Rubén Saldaña, is a spotlight for either track or single recessed installation, standing out by its optical lightness and elegance. Its disc-shaped body with slightly convex rim encloses an innovative combination of reflector and lens, and the joint action of both directs the light beam with maximum uniformity and minimum distance. Moreover, Six connects directly to the track adapter through an articulated arm, allowing orientation of the fitting in any direction.

## Moto-Zero Compasso 40 Track

### Formalighting

The smallest motorised track spotlight on the market, mounted vertically or horizontally, with a light head measuring only 40mm in diameter and 74mm in length. Available with a beam angle as narrow as 4-degrees, the Moto-Zero Compasso 40 is ideal for applications where size really does matter, and smaller is better. The movement of the light head and the light intensity are controlled at the tap and slide of a finger with the formalighting wireless app.

## Gabio

### Megaman

Megaman has introduced a range of aluminium linear LED pendants, Gabio. The patented louvre is available in 20W and 30W versions, producing up to 117 lumens per watt. Able to be configured with direct as well as direct-indirect lighting the louvre suits a variety of design requirements. Furthermore, Gabio features a unique design, incorporating light cells within its junctions, which conceals the joins completely to create unbroken lines of light, which delivers excellent design consistency.
